

RMS Inc releases campusM™ for Housing in partnership with oMbiel

Raleigh, NC, Birmingham, UK, March 2011 – Residential Management Systems Inc (RMS) in partnership with oMbiel, today announced the release of the campusM™ for Housing mobile application to colleges and universities globally. The campusM™ for Housing mobile application will allow students to access critical residence information from their smartphone. It also integrates seamlessly with the campusM™ Enterprise solution for the entire University.

“This system will allow residential staff to connect with students directly on the communications tool they prefer, their phone,” said Phil Mosely, Executive Vice President of Operations, of RMS. “We are very excited to be delivering an integrated student smartphone solution to our customers”.

Once downloaded, students will have mobile access to location-based information, enabling them to use their phones to locate dining halls, find their way to residence halls and other university facilities. One quick click will also give them access to comprehensive information about the university, up and coming residence programs/events, residential life news and important alerts helping students get the most out of their time living on campus. Students may also request to cancel an application, get information on their residence assignment, request a maintenance issue, request a room change, view available rooms and even get information about dining hall hours. In addition, in conjunction with our new RMS Alerts module, staff will be able to send out alerts to a students' phone for things like overdue payments, judicial issues and more!

“We are so happy to have partnered with oMbiel on this project,” said Phil Mosely of RMS. “With campusM™ for Housing now part of our product portfolio, we are addressing the increasing mobility needs of our customers by offering them an easy-to-use application that integrates with RMS and other housing vendor systems - giving students instant access to the information and services they need whilst on the move.”

The campusM™ suite of applications complements RMS's existing range of web-based residential management solutions enabling them to expand their offering to their broad educational customer base.
